

Windegger

# neo *alpin*

The future has begun

## Make the most of the advantages it brings:

- ✓ Suitable for fruit and viticulture
- ✓ 50% slope compensation
- ✓ Simple remote-control operation

### Independent

Time-consuming transportation of harvest boxes by tractor is a thing of the past. With the neo, you can transport the harvest crates how, when and where you want - and all automatically. The neo is remotely controlled and is extremely intuitive to use.

With a slope compensation of up to 50%, the neo can even be used on rough terrain, a stability achieved by its adjustable centre of gravity. With its narrow width, it is easy to control in any system. The neo is exceptionally manoeuvrable and can be loaded and unloaded from all sides.

### Safe

All Windegger machines, including the neo alpine, are inspected by an independent inspection body and certified to current **EU regulations**.

### Universal

The neo is of invaluable assistance in both fruit farming and viticulture: The harvest crate is always close to the picker, which means a faster, gentler harvest. In addition to transporting harvest crates, it can also be used in viticulture as a mobile seat when treating grapevines in summer.

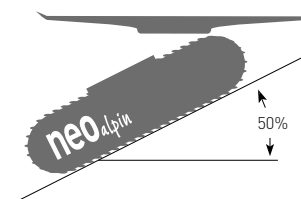

### Untiring

With its efficient electric drive and optimum battery life, the neo can be used for up to one day. On rugged terrain or for longer continuous work, a version with double battery power is available.

#### Technical specifications

- ✓ Length: 1.14 m
- ✓ Width: 1.12 m
- ✓ Capacity: 500 kg
- ✓ Battery power: 100 Ah
